63. (Currently Amended) An antigenic composition for detecting anti-aflatoxin antibodies from a sample of a test subject, said composition comprising a fungal or yeast cell culture supernatant containing fungal or yeast components shed into the supernatant during culturing; said antigenic composition being characterized by a reduction of antigenic activity of less than 20%, as measured by ELISA, after treatment with protease in 0.25M TRIS buffer at pH 7.2.

64. (Previously Presented) The composition of claim 63 wherein said supernatant comprises a mixture of antigens which are capable of binding to different fungal or yeast species.

65. (Previously Presented) The composition of claim 63 wherein said supernatant comprises fungal or yeast aflatoxin.

Claim 66. (Canceled)

67. (Previously Presented) The composition of claim 63 wherein said components are capable of binding said antibodies.
